Test/project + demo trading

About this course

This course provides a comprehensive, practical introduction to global financial markets. We start with the foundations of capital markets, including risk and return, market structure, regulation, and the role of major US and international exchanges.

Equity markets: types of shares, trading mechanics, the bid-ask spread, going long and short, indices, ETFs vs. mutual funds, valuation and earnings. Bond markets: pricing and yields in Excel, Treasury auctions, corporate bonds and ratings. Forex and commodities: FX arbitrage, leverage, hedging, futures, and key concepts like contango and backwardation. We link all of this to real-world economic indicators and instruments, including options and CFDs.

Finally, we cover digital assets through the CFA lens: distributed ledger technology and blockchain, proof of work vs. proof of stake, permissioned vs. permissionless networks, smart contracts, DeFi and tokenization; plus direct vs. indirect crypto investment vehicles, stablecoins, CBDCs, NFTs and security tokens. We use MetaTrader 5 as the platform for leveraged trading and short-term profit taking.

Connect to your real goal, becoming a pro, rather than chasing a cash grab. It's impossible to make money without hard-earned skills.

Assessment

End-of-course test and/or project, and making transactions using a demo account.

PROGRAM INSTRUCTOR

Jawdat Audeh

جودت عوده · MA · PMP®

Educated in the US and the UK in business administration and education, and certified in many areas of management by prestigious universities in the US, UK, Spain and Denmark.

Jawdat has lectured at several universities in the US, Syria and the Gulf, and brings more than twelve years of executive experience with international companies such as McGraw-Hill and SRMG.

Who it's for

Tailored for people with no prior knowledge of the financial markets who want a good grip of what they entail. Very useful for investors, and for students who want insight into how macroeconomics affects local and global markets. The course might open doors to financial independence: enough wealth to live comfortably with minimal work from home.

An intermediate level of English (B1) is required to fully engage with the course materials.
